

EXTECON™

The Next Generation in Foam Cleaning Technology

DuBois, a leader in sustainable technology, and a long time supplier to the processed food industry is pleased to introduce the next generation in open plant cleaning technology: ExteCon™. ExteCon stands for “extended contact” foam cleaning. ExteCon is designed with proprietary chemistry and well known and accepted building blocks of the cleaning industry to provide a revolutionary way to clean better, with less water, less chemical and in less time.

ExteCon products utilize a novel chemistry to allow them to be easily applied to any horizontal or vertical surface, even overhead areas. The product is applied through standard foaming equipment just like the old cleaners you are using today. The difference occurs when ExteCon hits the soiled surface. ExteCon goes on in a lower volume, semi flat style of foam versus conventional foams. The chemistry utilized allows ExteCon to stay in place for 10, 15 even 20 minutes without breaking and sliding down the soiled surface, but will not dry out like all foams left on a surface too long. But it’s not a gel! It’s not a thin film application either!

ExteCon is a unique technology that allows the foam to stabilize when applied with the right amount of air and water mixture through any foam application system. Because it stays where you apply it, and doesn’t dry out, you can foam much larger areas at a time before going to a rinse. Because ExteCon is very visible, there’s little chance of overlap or double foaming of a given area even if you have a large surface to foam that might take 20 minutes! And when you do rinse, the foam breaks rapidly into a flat mat that is easily washed to drain with half the rinse and chase water required of other foams.

Initial ExteCon application.

ExteCon at 15 minutes.

Easily rinsed ExteCon saves time.

ExteCon breaks flat and rinses freely to drain saving water and time.

If time is money, ExteCon is the answer. In the time it takes to apply and rinse typical foams from soiled surfaces over a 25 minute cleaning period, ExteCon can clean up to 4 times the surface area and consume far less rinse and chase water in the process!

Because ExteCon maintains contact for such an extended time, the chances of getting those tough to clean areas, and crack and crevices really clean is enhanced. DuBois has formulated ExteCon in two versions, ExteCon GP, for stainless steel surfaces, and ExteCon SMS for use with soft metals like aluminum. Both products deliver the sustained performance you have come to expect of DuBois, and at a price that is comparable in use-cost to any foam products on the market.

Without increasing your unit cost you get:

- Labor savings
- Downtime savings
- Water savings
- Chemical savings

Let DuBois show how to put ExteCon to work in your facility. We can show you how it works without tying up any of your cleaning equipment, air, or power! Ask for the ExteCon demo today!
